

# WHAT'S IN A FLOOR?

**Karta<sup>T</sup>**  
REMAPPING THE FUTURE OF FLOORING

## KARTA PLATED®

Our specialist AC5-rated topcoat, created from plastic-free natural resins.

## DIGITAL PRINT

High-definition prints using biodegradable ink, perfectly replicating wood.

## RECYCLED LEATHER

Recycled leather and vegetable oils combined to make up this durable layer.

## WOOD FIBRE

PEFC-certified, offering exceptional strength and sustainability.

## CORK BACKING

For insulation, comfort, and an integrated underlay.

The global leather industry produces almost two billion kilos of scrap material each year. We work to divert this from landfills throughout Europe, using it to create naturally durable flooring.

All materials used in our floors are sourced locally to manufacture, meaning a reduced carbon footprint. Not only that, but Karta floors are made using energy self-sufficient production.

Our Karta Plated® topcoat is made from natural, plastic-free resins, offering superior resistance against scratches and abrasion without compromising on sustainability.

Karta's wood fibre is sourced from recycled wood, wood waste, and parts of the tree not normally used in manufacturing. Cork is harvested from Quercus suber bark without felling or damage, and each tree can be harvested for up to 200 years.
